PART – B

(50 Marks)

2.a) Illustrate the types of System Calls in Unix.
b) Explain the following System calls:
(i) open() (ii) seek() (iii) read() (iv) fork() [5+5]

OR

3.a) Differentiate between a Process and a Program.
b) Explain various process control commands and their options with examples. [5+5]

4.a) Discuss about the three states of TCP connection establishment and termination.
b) Construct a program to illustrate bind(), listen() and accept() system calls. [5+5]

OR

5. Briefly explain the following Networking tools:
a) ping b) finger c) netstat d) tracepath e) host [10]

6.a) Explain the concept of modules and objects in Perl.

b) Write a Perl program that reads a file containing city and country as records and creates a hash of arrays containing countries as key and cities as values.
For example for the input
{Delhi: India, Hyderabad: India, New York: USA, Chicago:USA},
the program is required to create hash table
{India: [Delhi, Hyderabad], USA: [New York, Chicago]} [5+5]

OR

7.a) Explain various built-in operators and pattern matching statements in PERL.

b) Distinguish the following control statements of Perl.
i) While and until
ii) Next and last. [5+5]

8.a) Analyse the use of procedures and scope in TCL with suitable examples.

b) Discuss about the nuts and bolts of TCL Internet Programming. [5+5]

OR

9.a) Discuss in detail about the variables and data structures in TCL

b) Illustrate the use of eval, source, exec and uplevel commands in TCL with suitable examples. [5+5]

10.a) Compare Python Lists, Tuples and Dictionary.

b) Write a Python program to output the greatest of three given numbers. [5+5]

OR

11.a) Explain how to handle an exception using try except block with the help of a program?

b) Construct a Python script to create a user defined exception. [5+5]
